

# Wireless Rechargeable TIG Foot Pedal

## The Facts:

- Range up to 100 Ft.
- Lithium Rechargeable Battery Pack with convenient on/off switch mounted outside.
- Sturdy, impact resistant molded plastic outer housing reduces weight.
- Anti-Skid material on top and bottom of pedal prevents slipping and sliding.
- Steel reinforcement bar inside, with separate magnet to attach pedal for storage.
- Long range antenna mounted on the inside prevents damage and breakage.
- Work 40+ days on 8 hour shifts before recharge.
- Rechargeable battery pack lasts up to 300 recharge cycles before degradation.
- Can have up to 50 units in operation in single area with no cross talk.
- Pedal is a slender low profile design for reduced operator fatigue and stability.
- Pedal Weight: 3.5 lbs.
- Dimensions: 8.6" L x 5.7" W x 3.5" H

## The Report:

In our testing side by side with similar types of wireless pedals, the NOVA Wireless pedal performed better when testing them in real world conditions. The NOVA pedal came out of the testing with more than twice the life before recharge of similar models. You should be able to post 40+ days between charges working full 8 hour production shifts. While you may see long life spans posted by other brands, these just don't hold up to real life conditions. With over 300 expected battery charging cycles before you begin to see battery decline, this gives you a truly long life pedal. If you need to store the pedal, the unit has an "off switch" to prevent accidental activation and discharge of the pedal.

With the best warranty in the business, this pedal could be a real solution to your "long distance" TIG welding needs.
